For students enrolled in Probability and Statistics for NEXT school year. Summer Packet

Name:

This packet is to help you review various topics that are considered to be prerequisite knowledge upon entering Probability and Statistics. In order to ensure that the good skills that you developed in previous math courses do not disappear, working on this packet is highly recommended over the summer. A good habit would be do at least one math problem every day. Enjoy your summer, but be sure to come prepared with the necessary knowledge to continue on into Probability and Statistics next year. These skills and topics will be assessed in the fall.

		9

Frequency Tables, Line Plots, and Histograms

Aimee asked students in her grade how many CDs they own. She displayed her data in a frequency table. Each tally stands for 1 CD.

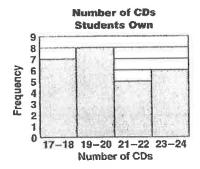

Students' CD Collections

Number of CDs	17	18	19	20	21	22	23	24
Tally	1441	I	1111	Ш	1	1111	11	1111
Frequency	6	1	5	3	1	4	2	4

She displayed the same data in a line plot. Each X stands for 1 CD.

Nu	mbe	rof	CDs	Stu	dents	s Ow	'n
X							
X		X					
X		Х			X		X
Х		Х	X		X		X
X		X	X		X	X	Х
X	X	X	X	X	Х	Х	X
17	18	19	20	21	22	23	24

She also made a histogram to show the frequencies. The bars represent intervals of equal size. The height of each bar gives the frequency of the data.

Use the frequency table for Exercises 1-3.

- Ms. Ortiz's class is planning a school garden. She asked her students how many rose bushes they want in the garden. She recorded the data in a frequency table. Complete the table.
- 2. Use the frequency table to make a line plot for the data.
- 3. Draw a histogram of the students' data.

Number of Rose Bushes	1	2	3	4	5	6
Tally	1	пи	111	1444	1	-1
Frequency						

Circle Graphs

The class took a survey of favorite foods.

The results are shown in the table and the circle graph.

To make a circle graph:

- ① Find the total number of votes.
- 2 Find each part of the total as a fraction or percent.
- 3 Find the measure of each central angle in the circle graph.
- ① Draw, label, and title the graph.

Food	Votes	② Fraction	%	③ Degrees
Burgers	8	$\frac{8}{48} = \frac{1}{6}$	162/3	60°
Pizza	16	1/3	33 ¹ / ₃ %	120°
Steak	6	18	121/2%	45°
Tacos	12	1/4	25%	90°
Pasta	6	18	121/2%	45°
Total	1			360°

1.

Find the measure of the central angle that represents each fraction or percent in a circle graph.

Monthly Family

Misc.

6.
$$\frac{1}{10}$$

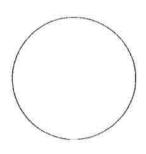

Display the data in each table in a circle graph.

9. a monthly family budget

Budget		
Item	Amount	
Rent	\$425	
Food	\$150	
Clothes	\$50	
Gas	\$75	
Phone	\$25	
-		

10. number of children per family

Children per Family				
Children	Families			
0	4			
1	15			
2	20

Stem-and-Leaf Plots

A stem-and-leaf plot is an easy way to show data arranged in order.

8th Grade 100-M Dash (Times to Nearest 0.1 s)

			the second second second	
13.1	16.2	15.5	15.2	13.5
15.3	14.8	14.4	17.5	12.2
14.1	16.1	16.9	15.3	16.8
16.0	15.3	12.0	18.2	14.6
13.2	18.3	16.6	15.3	18.8

- 1 Choose stems. The times range from 12.0 to 18.8. Choose 12 to 18 as stems.
- 2 List the tenths digits as leaves.

3 Make a key to explain what each stem and leaf represents.

18 | 2 means 18.2

The mode is the most frequent number.

The mode is 15.3 seconds.

The range is the greatest number minus the least number.

The range is 18.8 - 12.0 = 6.8 seconds.

The median is the middle number or average of the middle two numbers. The median is 15.3 seconds.

1. Complete the stem-and-leaf plot for the data.

8th Grade 200-M Dash (Times to Nearest 0.1 s)

32.5	32.1	38.5	31.7	34.7
29.3	35.2	34.4	30.2	35.3
34.7	31.9	36.0	32.2	36.7
32.2	31.4	34.7	29.5	36.9
36.4	33.4	38.6	34.7	37.3

Times for the 200-M Dash

4. The median is 3. The range is _____. 2. The mode is _____.

		9	

Percent of Federally Owned Land in Ten Western States

45% 24% 52% 61% 28%

Box-and-Whisker Plots

Make a box-and-whisker plot for the data set.

First list the data in order from least to Step 1: greatest. Find the median.

24 28 34 36 42 | 45 48 52 61 63

42% 34% 48% 63% 36% Since there is an even number of percents (10), there are two middle numbers. Add them and divide by 2.

 $\frac{42+45}{2}=\frac{87}{2}=43.5$ The median is 43.5.

Find the upper and lower quartiles. Step 2:

The lower quartile is the median of the lower half.

24 28 34 36 42

The lower quartile is 34.

The upper quartile is the median of the upper half. The upper quartile is 52.

45 48 52 61 63

Draw a number line. Mark the least and greatest values, the median, Step 3: and the quartiles. Draw a box from the first to the third quartiles. Draw whiskers from the least and greatest values to the box.

The data range from 24 to 63. A scale of 5 from 20 to 70 would have

Make a box-and-whisker plot for each data set.

1. area in 1,000 mi² of 13 western states

122 164 71 98 84 147 114 111 98 85 104 71 77

median:

lower quartile:

upper quartile: _

2. percent of area that is inland water for 11 northeastern states

13% 4% 26% 4% 32% 13% 15% 3% 21% 7% 21%

median:

lower quartile:

upper quartile:

Scatter Plots and Trends

Gilbert is investigating the relationship between the number of credit cards a person has and the amount of credit card debt.

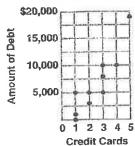

First, he made a table of his data.

Credit Cards and Credit Card Debt

Number of Cards	Amount of Debt
i	\$0
1	\$1,000
1	\$5,000
2	\$3,000
2	\$5,000
3	\$10,000
3	\$5,000
3	\$8,000
4	\$10,000
5	\$19,000

Then he plotted the data in a scatter plot.

Credit Card Debt

Gilbert's scatter plot shows a **positive trend** in the data. That means as the number of credit cards goes up so does the amount of debt. As one value goes up, so does the other.

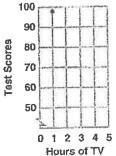

In a negative trend, one value goes up while the other goes down.

 Dana surveyed her friends about how much TV they watch and their average test scores. Her results are shown below. Complete the scatter plot for the data.

Test Scores and TV

TV Hours Per Day	Average Test Score	TV Hours Per Day	Average Test Score
1	98	3	79
1	86	3	73
2	90	3	75
2	82	4	62
2	85	5	68

Test Scores and TV

- 2. Is the trend in the data negative or positive? Explain.
- 3. Describe the relationship Dana likely found between test scores and TV time.

26 Data Analysis and Probability Workbook

2		

Measures of Central Tendency

The median of this set of data is the middle value when the scores are ordered. 23 25 25 26 26 26 26 26 27 27 28 29 Since there are two middle scores, add them and divide by 2.

$$\frac{26+26}{2}=26$$

The mean is the sum of the scores divided by the number of scores.

$$25 + 26 + 28 + 25 + 26 + 27 + 27 + 26 + 26 + 29 + 26 + 23 = 314$$

 $\frac{314}{12} = 26.166667$, or about 26.2 pages

The mode is the score that occurs the most. The mode is 26 pages.

Number of Pages Read by Members of the Science Fiction Book Club

				-
25	26	28	25	
26	27	27	26	1
26	29	26	23	- 1

All rights reserved.

@ Pearson Education, Inc., publishing as Pearson Prentice Hall

Choose a calculator, pencil and paper, or mental math. Find the mean, median, and mode of each set of data.

- 1. movies seen: 3 3 1 4 0 4 2 5 7 4 1 2
- 2. miles hiked: 5 10 9 12 8 4 5 7 5 13 11
- 3. runs scored: 0 0 8 4 15 9 1 1 6 7 10 2
- 4. costs of a ride: \$3.25 \$2.50 \$4.00 \$4.00 \$3.50 \$2.00 \$4.00 \$3.00 \$2.50 \$3.00 \$4.00

Name the measure of central tendency you would report to your parents. Give your reason.

- 5. test scores: 89 84 79 80 81 55
- 6. friends' allowances: \$10 \$15 \$12 \$15 \$8

Misleading Graphs

Data can be displayed on graphs in ways that are misleading.

The horizontal scales make these graphs seem different.

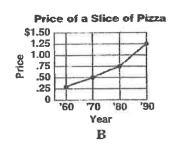

As the numbers are moved farther apart, it appears that the change over time is less.

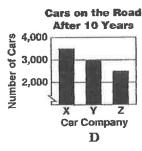

These graphs may seem different because of how the vertical scales are drawn.

The break in the vertical scale makes the differences seem greater than they really are.

- 1. Which graph might be used to convince someone that the price of pizza has risen too quickly over the years?
- 2. Which graph might be used to convince someone that pizza makers should raise their prices?
- 3. Name 2 ways in which the pizza graphs differ.
- 4. Which graph would Car Company X use to show that its cars last longer than the competition?
- 5. Which graph of cars still on the road after 10 years would Car Company Z prefer?
- 6. Name 2 ways in which graphs C and D differ.

Example

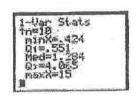

Enter the data from the table at the right. Find the mean, median, standard deviation, and the first and third quartiles.

STEP 1: Enter the tourist data into list L1 by pressing

LI	JL2	1.3	. 4
.061			
551	1	ı	
E DA	4	1	

STEP 2: View the statistics for the tourists visiting the United States by pressing STAT 1 ENIEZ. Press five times to scroll to the bottom of the statistics.

The 10 Most America-Loving Countries

Country	Tourists (in millions)
Canada	15,0
Mexico	11.325
Japan	4.065
Britain	2.921
Germany	1.705
France	0.863
Brazil	0.661
Italy	0.551
South Korea	0.504
Venezuela	0.424

Source: Time Magazine

Note: By default the TI-83/TI-83 Plus looks for data in L1. If the data is stored elsewhere, the list name must follow 'L-VAR Stats'.

STATISTICS: The following table identifies the statistical symbols.

x: mean of entries

Sx: sample standard deviation

Q1: first quartile of entries

Σx: sum of entries

population standard deviation

Med: median of entries

 Σx^2 sum of the squares of entries

total number of entries

Q3: third quartile of entries

minX: smallest entry

maxX: largest entry

Exercises

Enter the data. Find the mean, median, standard deviation, and the first and third quartiles.
